

**EU PROPOSAL FOR A RESOLUTION ESTABLISHING A QUOTA
ALLOCATION SYSTEM FOR THE MAIN
TARGETED SPECIES IN THE IOTC AREA OF COMPETENCE**

The Indian Ocean Tuna Commission (IOTC),

CONSIDERING the objectives of the Commission to maintain stocks in perpetuity and with high probability, at levels not less than those capable of producing their maximum sustainable yield as qualified by relevant environmental and economic factors, including the special requirements of developing States in the IOTC area of competence;

BEING MINDFUL of Article XVI of the IOTC Agreement regarding the rights of Coastal States to the exercise of sovereign rights in accordance with Part V of the UN Convention of the Law of the Sea (UNCLOS) within a zone up to 200 nautical miles under their jurisdiction and the duties of Coastal States under UNCLOS to inter alia ensure through proper conservation and management measures that the maintenance of the living resources in the exclusive economic zone is not endangered by over-exploitation and the conditions regarding access to the surplus of the allowable catch;

CONSIDERING Article 63 (2) of UNCLOS on the duty of cooperation of the coastal States and other States for the purpose of conservation and development of straddling stocks occurring within the Exclusive Economic Zones (EEZs) of two or more coastal States and in an area beyond or adjacent to it and Article 64 (1) of UNCLOS on the duty to cooperate between coastal States and other States whose nationals fish in the region to ensuring conservation of highly migratory species both within and beyond the EEZs;

BEING MINDFUL of Articles 87 and 116 of UNCLOS concerning, respectively, the freedom of fishing in the high seas and the right for all States for their nationals to fish on the high seas;

RECOGNISING the special requirements of the developing states in Article 24 of the Agreement for the Implementation of the Provisions of the United Nations Convention of the Law of the Sea of December 1982 relating to the Conservation and Management of Straddling Fish Stocks and Highly Migratory Fish Stocks (UNFSA);

RECALLING that Article 5, of UNFSA requires Coastal States and States fishing on the high seas to adopt measures to ensure the long-term sustainability of straddling fish stocks and highly migratory fish stocks and to ensure that the conservation and management of highly migratory fish stocks is based on the best scientific evidence available;

FURTHER RECALLING that Article 6, of UNFSA, requires the states to be cautious during the application of precautionary approach when information is uncertain, unreliable or inadequate and this should not be a reason for postponing or failing to take conservation and management measures;

FURTHER RECALLING that Article 7 and 8 of the UNFSA point out the equal rights and obligations of all States fishing straddling fish stocks or highly migratory fish stocks in high seas;

BEING MINDFUL that Article 119 UNCLOS requires States to ensure that conservation measures and their implementation do not in form or in fact discriminate against the fishermen of any state;

RECOGNISING that Article 8 of UNFSA requires that terms of participation of a State in a RFMO shall not be applied in a manner which discriminates against any State or group of States having a real interest in the fisheries concerned;

NOTING that Resolution 15/10 sets as a guideline that for a stock where the assessed status places it within the red quadrant, the aim shall be to end overfishing with a high probability and to rebuild the biomass of the stock in as short time as possible;

FURTHER CONSIDERING the recommendations of the 18th IOTC Scientific Committee held in Bali, Indonesia, 23-27 November 2015 that the catches of yellowfin tuna have to be reduced by 20% of the 2014 levels to recover the stocks to levels above the interim target reference points with 50% probability by 2024, and subsequent recommendations by the IOTC Scientific Committee;

FURTHER NOTING the results of the Kobe process recommending the harmonisation of a series of targeted recommendations in key areas of by-catch, coordinated scientific efforts, reduced capacity, decision-making guidelines, and compliance and enforcement;

FURTHER CONSIDERING the active and stable important investments made in harvesting, processing and trade industries are essential to keep IOTC fisheries economic and socially viable and maintain jobs created in the region as well as to supply international markets with tuna and tuna like products.

BEING MINDFUL of Article V of the IOTC Agreement to adopt on the basis of scientific evidence, conservation and management measures, to ensure the conservation of the stocks and to promote the objective of their optimum utilization throughout the Area;

ADOPTS, in accordance with the provisions of Article IX, paragraph 1 of the IOTC Agreement, the following:

Main principles

1. In order to ensure the long-term sustainability of the stocks, a Total Allowable Catch (TAC) for stocks covered by the IOTC Agreement shall be established by the IOTC based on a recommendation from the Scientific Committee at levels not less than those capable of producing maximum sustainable yield (MSY) in accordance with the relevant management procedure, or in its absence, with an agreed biological reference point. The TAC allocation shall be applied to all stocks in a gradual manner focusing in the first place on stocks where their assessed status places it within the upper left quadrant (red) of the Kobe plot.
2. The TAC shall be allocated among Members and Cooperating Non-Members (CPCs) in a fair and equitable manner according to this Resolution and shall apply to all fishing gears. The TAC allocation shall be limited to IOTC CPCs and consist of an initial baseline allocation for all CPCs plus complimentary allocations for certain CPCs to be adjusted by certain corrections factors as set out below.
3. A CPC that has failed to report nominal catch data (exclusively), including zero catches, in accordance with the Resolution 15/02, paragraph 2, for one or more species for a given year, is not eligible to receive a TAC allocation. However, if a CPC has provided incomplete reporting on nominal catch data it remains in principle eligible to receive a TAC allocation but the Commission may pursuant to Resolution 16/06 consider prohibiting that CPC from retaining such species as of the year following the incomplete reporting until such data has been received by the IOTC Secretariat. In such cases, a proportional adjustment amongst CPCs on the basis of their final allocation shall take place.
4. CPCs having compliance score less than 60% will also be excluded from receiving a TAC allocation.

5. The TAC shall be set for five-year periods. As an exception, where exceptional circumstances exist based on a recommendation from the Scientific Committee, the Commission may revise the TAC before the end of any five-year period. The Scientific Committee will develop a protocol for the application of extraordinary circumstances for consideration by the Commission at its [23rd Annual Session in 2019].
6. Any upwards or downwards revision of the TAC due to exceptional circumstances in accordance with paragraph 5 shall lead to a proportional adjustment amongst CPCs on the basis of their final allocation.
7. In order to assure CPCs and their nationals who fish or have made other fishing related investments in the convention area relative stability of their fishing and related activities and to avoid any sudden economic dislocation/disruption in the countries concerned any final allocation that results in a reduction in excess of [10]% of the of the average catches in the last 10 years or the precedent quota, if a quota was already established, shall be implemented gradually over a period of [5-10] years (hereinafter referred to as the "stability principle").
8. In order to accommodate requests from new entrants with a real interest in the fishery, a set-aside of [1]% of the overall TAC shall be reserved for allocations to new entrants established in accordance with the provisions of this Resolution. This [1]% set aside shall be equally shared by all new entrants, regardless the moment they join IOTC. If there are no requests by new-entrants or the actual allocation to new entrants is less than the set-aside of [1]%, the remaining amount shall be distributed proportionally amongst Members on the basis of their final allocation.

Initial baseline allocation

9. The initial baseline allocation of the TAC amongst CPCs shall be based on historical catches covering the period [2000-2016]. For the purposes of this Resolution and in order to calculate the initial baseline allocation historical catches taken within an EEZ shall be apportioned between the respective coastal State and the flag state of the fishing vessel(s) that took the catches in a proportion of respectively 10/90 of those catches. This reallocation of historical catches shall be dependent on reliable catch data being available and validated for catches within the EEZ concerned. In accordance with the principle of stability the change in attribution that result from this new approach shall be implemented gradually over a transitional period of 10 years
10. The initial baseline allocation shall comprise [85]% of the TAC. The remaining [15]% of the TAC will be set aside for redistribution through a complementary allocation [8%], new entrants allocation [1%] and adjusted by correction factors [6%].

Complementary allocation

11. In addition to the baseline allocation provided for in paragraphs 9 and 10 and to accommodate the special requirements of the developing States in Article 24 UNFSA and special interests of developing countries in the Indian Ocean Region to benefit equitably from the fishery resources in the region as recognised in the IOTC Agreement the following complementary allocations shall be added to the baseline allocation to be distributed amongst the following CPCs:
 - a) **Least developed countries** (LDCs) on the list of LDCs established by the United Nations' Committee for Development (CDP) and/or Small Island coastal States that the fisheries sector (including processing industry) amounts to more than [20]% of their GDP shall receive a supplementary baseline allocation of [2/3] of the

complementary allocation in paragraph 11 to be distributed amongst all LDCs and Small Inland coastal States mentioned above in proportion of the size of their EEZs.

- b) **Coastal developing states**, excluding States described in a), shall receive an additional allocation of [1/3] of the set aside described in paragraph 11 to be shared amongst all coastal developing states in proportion to the size of their EEZs.
12. The complementary allocation shall correspond to [8]% of the TAC. Any CPC having at the end of the exercise a quota for particular species more than [5-10%] of the TAC will no longer be eligible for a complementary allocation for that species.
13. In order to benefit from the complementary allocation the CPCs concerned must confirm that such additional allocations and the associated future fishing efforts are consistent with the their Fleet Development Plan (FDP) submitted under Resolution [15/11] and its actual implementation (>50%).

Correction factors

14. The following correction factors will be applied to the sum of the initial and the complementary allocation as per paragraphs 9 to 13 in order to top-up where appropriate the allocation for a particular CPC:
- a) real fishing interest, measured by having an active fleet or a FDP and under implementation;
 - b) contribution to the effective conservation and management of fishery resources, including the provision of accurate and timely data and effective monitoring, control, surveillance and enforcement;
 - c) the record of compliance with the IOTC conservation and management measures under the Agreement, including effective monitoring, control, surveillance and enforcement, as evidenced by IOTC compliance score of more than [80%];
 - d) the contribution of the fisheries for the stocks regulated by IOTC to the national food security/needs, domestic consumption, income resulting from exports, and employment;
 - e) the interests of artisanal, subsistence and small-scale coastal fisheries;
 - f) the public and/or private sector investments made in the tuna sector, and the weight of imports of tuna products on economies and on the global consumption of tuna products;
 - g) contribution both in kind and through the provision of financial support to the conduct of scientific research with respect to fishery resources and the public dissemination of the results of such research;
 - h) contribution to capacity building in developing coastal States.
 - i) Cooperating non-contracting Parties will be eligible for a maximum of 80% of its TAC as per paragraphs 9 to 13. Downwards revision of the TAC to Cooperating non-Contracting Parties shall lead to a proportional adjustment amongst CPCs on the basis of their final allocation.
15. The correction factors shall comprise at the maximum [6]% of the overall allocation plus any left-over allocations as a result of decreases in the allocations as a result of the applications of the correction factors in paragraph 14 above. The application of the correction factors can't result in an increase of the total TAC.

Final allocation

16. The sum of the initial allocation, the complementary allocation, the allocation for new entrants, plus the correction factors shall constitute the final allocation for the five-year period.
17. In order to ensure the stability of producers, canneries, markets, investments, food supply and to promote the social and economic development and the livelihood of the fishermen, including the need to minimize economic disruption and dislocation, any initial allocation or revision of that allocation in accordance with paragraphs 9 to 14 above that results in a decrease of more than 10% of the allocation from the preceding period for any CPC shall be implemented progressively over the following 10 year period.
18. The final allocation is not to be considered a precedent for future allocation decisions or revisions.

Weighting of the allocation criteria

19. Each Member of the Commission commits to making a good faith effort to reach agreement on a weighting scheme for the correction factors set out in this Resolution within 2 years after the adoption of this Resolution.

Carry forward

20. Any part of a CPCs allocation that is not caught in a particular year can only be carried forward if the status of the stock concerned is assessed to be within the green quadrant of the Kobe plot and in no case can be carried forward beyond two years.

Revision of the allocation criteria

21. Any five-yearly or extraordinary revision of the TAC allocation amongst CPCs shall be based on the criteria established in this Resolution.

Transferability

22. No CPC shall trade or sell its quota allocation or a part thereof unless authorised to do so by the Commission or unless provided for by an international agreement between a CPC coastal State and another sovereign State or Regional Economic Integration Organization.
