² Areas Beyond National Jurisdiction (ABNJ, Common Oceans) Tuna Project, Western and Central Pacific Fisheries Commission

ABSTRACT

The current paper responds to a recommendation from SC11 to undertake a trial use of the Bycatch Data Exchange Protocol. SPC has prepared and formatted the bycatch data it holds into the Bycatch Data Exchange Protocol for 2013-2015. This process has identified several issues to address, noting that for some of them solutions are already in progress. Specific recommendations include:

1. The BDEP trial has extended ongoing work to improve the utility and accessibility of observer data and supports requests from international organisations for summaries of species of special interest bycatch in the WCPO. Accordingly, the BDEP trial should continue for 2017 (subject to resourcing for any additions and changes to the data extraction developed under this project).
2. Estimating mortality rates for purse seine - information on the condition of the landed and released catch (e.g. CONDITION) collected by observers on the GEN-2 form needs to be linked to set information so that mortality/release rates can be calculated for purse seine. This recommendation has previously been agreed by the Commission (Anon, 2015b) and will be actioned in late 2016/early 2017. Note that retrospective analyses are still required to make the link for historical data.
3. Providing a table of observer effort by 5°x5° - SC12 to consider if this is required, and if so, to have this published on the WCPFC web site.
4. Where observer programmes do not provide distinct vessel names to identify trips seek advice from the respective CCMs on how to proceed with the filtering of the data according to the WCPFC data rules to ensure data that may not have been excluded under normal circumstances are available for future BDEP reports.
5. Review and update length-length and length-weight relationships for BDEP for species of special interest so that more accurate estimates of catch in both number and weight can be determined.
6. Update the BDEP protocol to report seabirds to the species level, where possible; this initiative should also include improvements to the species guides for observers and identification at sea to ensure higher quality data are available for reporting.
7. Expand the BDEP protocol to marine mammals to the species level, where possible.
8. In future, the BDEP tables be published as public domain information on the WCPFC web site (at <http://www.wcpfc.int/tuna-fishery-data>) and any developments with the BDEP tables would be addressed within the annual generic paper on data gaps and related issues.
9. Subject to resourcing, to undertake a trial regional BDEP compilation for purse seine at the scale of the Pacific Ocean, in co-operation with the IATTC and CCSBT Secretariats.

In summary, SPC and the ABNJ-GEF Tuna Project recommend that this work be continued and resourced as a positive step toward improving the quality of and access to bycatch data within and across RFMOs.

1. INTRODUCTION

1.1 Background

A meeting of invited experts, convened in January 2015 in Keelung, Taiwan, to progress elements of the Work Plan agreed by the Joint Tuna RFMOs Technical Working Group-Bycatch, recommended that an existing data exchange format be used as the basis for summarizing data in each of the five tuna RFMOs (tRFMOs). Compiling basic metadata across the tuna RFMOs aims at i) understanding and harmonizing tuna RFMO bycatch data holdings; ii) reviewing and improving bycatch data collection and reporting programmes; and iii) planning for intra- and inter-RFMO analysis of bycatch rates and mitigation effectiveness (Anon. 2015a).

The proposed t-RFMO bycatch data exchange protocol consists of i) a summary of the total fishing effort and total observed effort by area, fishery and year; and ii) a summary for the same strata (area, fishery and year) of observed captures, mortalities and live releases of various taxa known to be vulnerable to interactions with tuna fisheries. It is understood that a lack of taxonomic identification, spatial resolution constraints, scarce data holdings and other technical and policy issues may limit the data that some t-RFMOs can provide. Nevertheless, initiating a flow of summarized information and taking stock of existing datasets is an important first step toward harmonization and improved management (Clarke et al. 2015).

The concept of a Bycatch Data Exchange Protocol (BDEP) amongst the t-RFMOs was raised at SC11, noting that CCSBT already an internal BDEP procedure in place (Clarke et al. 2015). SC11 agreed to proceed with the WCPFC component of a BDEP, subject to resourcing from the ABNJ-GEF Tuna project, and subject to WCPFC data confidentiality rules (by paras. 654-657 of the SC11 Summary Report). Subsequently IOTC has also agreed to trial the BDEP, with the Secretariat filling out the template and intending to present it at the IOTC Working Party on Ecosystems and Bycatch in September 2016.

1.2 Bycatch Data Exchange Protocol 2016

In response to this recommendation, this working paper has been prepared for SC12 to be addressed under the Ecosystems and Bycatch Theme. SPC, with resourcing from the ABNJ-GEF Tuna Project, has prepared and formatted the bycatch data it holds into the Bycatch Data Exchange Protocol (BDEP) template as described by “Proposal for a Bycatch Data Exchange Protocol (BDEP) amongst the t-RFMOs” (Clarke et al. 2015). This paper reports on the methods for compiling the template, issues identified in compiling the data, and recommendations for future work.

2. METHODOLOGY AND ISSUES ARISING

SPC has filled out the BDEP template (Clarke et al. 2015), based on data extracted from the WCPFC ROP database (not the entire SPC observer holdings). Note that where explicit written permission was obtained from WCPFC CCMs to use their observer data (held by SPC), it has also been included in the summary (that is, non-ROP trips for observer activities in NZ and AU waters). In each of the following sections the method applied is identified, the BDEP summary arising is highlighted, and any issues resulting from the process of preparing the data are identified.

The first step in developing the extraction routines for the BDEP template was to identify the WCPFC-defined observer data, which includes the WCPFC Regional Observer Programme (ROP) defined trips and additional non-ROP observer data which have been authorised by relevant CCMs to be included in the WCPFC defined observer data (see Table 8 in Williams, 2014). The extraction routines required a function to output each of the species groupings defined in the BDEP template. The data extracted were filtered to adhere to the WCPFC data rules for public domain data (i.e. removing the cells representing the activities of less than three vessels). The summarized data presented in Tables 2–5 represent unraised data, although an indication of coverage of the data in Tables 2–5 is provided in Table 1a (the observer coverage column has been filled in with a simple calculation of the ratio of observed to total effort). The main gap in the WCPFC ROP longline data in Tables 2 and 4 are the comprehensive Hawaii longline observer data for activities within their EEZ, and the main gap in the WCPFC ROP purse seine data in Tables 3 and 5 are the data for the domestic fisheries of Papua New Guinea and Solomon Islands.

The total data holdings are identified in Tables 1a and 1b. These include all ROP data held by SPC (see Table 8 in Williams, 2014) and also data from New Zealand and Australia observer programmes for which approval is held (AU and NZ observer data since 2008 have been included in the WCPFC observer database and so have been included in the data extracted here). However, three observer programmes either do not provide distinct vessel names, or have only recently done so, and accordingly it has been impossible to apply the 3-vessel rule to those data to date. This will need to be resolved in future BDEP extractions (noting that for at least two of the three CCMs this will be resolved before 2017, and advice is being sought from the remaining CCM on how to proceed with their data). As a result, the filtering of the data according to the WCPFC data rules (i.e. data representing the activities of less than three vessels) have resulted in the removal of data from these fisheries that may not have been filtered under normal circumstances (i.e. with distinct vessel identifiers).

An explanation of the difference in the coverage rates in Tables 1a and 1b is required and is a future exploratory analysis which needs to be completed. The summarized data in Table 1b represents all observer data held by the SPC and includes ROP as well as non-ROP data that the owner of the data has not authorized as being released to the WCPFC. These data that are held by SPC are generally only for internal scientific analyses, nonetheless benefiting the WCPFC. These unleased non-ROP data essentially represent trips from certain CCMs which are solely within the EEZ of that CCM, and that CCM has yet to authorize provision of the data to the WCPFC. The required coverage of the WCPFC tropical purse seine fishery since 2010 is 100% and of the WCPFC longline fishery is 5%, although the available data (both WCPFC and to SPC) is clearly below these required levels; some reasons for the low levels of coverage are explained in Williams et al. (2016).

The initial reviews of the summarised data highlighted several issues which required correction in the observer data and additional data entry checks to avoid similar issues in the future. For example, the species code MAH was used on a number of occasions by one observer for mahi mahi (*Coryphaena hippurus*), but this code is in fact for the Northern giant petrel (a seabird), unlikely to be encountered on a purse seine vessel in the same way and to the extent that mahi mahi would be encountered. As mentioned to avoid these issues in the future a series of data entry and post-entry error checks have been developed that are specific to these species/species groups and the output columns required in the template (for example, where FATE code may not be appropriate for that species; where FATE and COND code combination are not appropriate; where species is encountered outside its normal area of occurrence). While this work has ensured improvements in the quality of the data, there remains further work to do and more investigation of the data. Part of this is that the data quality checks only exist in the code at this stage and they are numerous. A useful development would be to compile these into a list as part of the development of meta-data describing the observer data (noting that this would require additional resourcing due the time involved).

1.3 Whole of WCPFC Area summary

The observed and estimated captures and mortalities for key bycatch species groups by year for the WCPFC longline fishery are provided in Table 2. The unit for both “captures” and “mortalities” is numbers (note that these are sometimes estimated from weights where the observer has recorded a visual estimate for weight only). The observed and estimated captures and mortalities for key bycatch species groups by year for the WCPFC purse seine fishery are provided in Table 3. Capture rate has been defined for longline using captures per 1000 hooks. Capture rate has been defined for purse seine using captures per set. NOTES are provided with these tables to explain the source of data and other aspects of the data presented, for example:

- The source data is the WCPFC Regional Observer Programme (ROP) Database;
- There is a backlog of data yet to be provided and processed, mainly for 2014 and 2015;
- The WCPFC Data rules (<https://www.wcpfc.int/doc/data-02/rules-and-procedures-protection-access-and-dissemination-data-compiled-commission>) related to the dissemination of WCPFC data in the public domain have been applied; that is, summarized data representing the activities of less than three vessels have been removed;
- Where the observed capture rate is ‘0.000000’ but the number of captures is greater than zero (0), this means that the capture rate is smaller than the significant figures provided in this table (i.e. <0.0000005). This also applies to the observed mortality rates and number of mortalities;

- The sum of the mortalities and live releases will often not equal the captures (i.e. interactions with the gear) since the observer (for one reason or the other) may not have recorded the FATE and the CONDITION of every encounter;
- For the purse seine fishery, information on the condition of the landed and released catch (e.g.) mortalities are collected by observers on the GEN-2 form only which does not currently align to the set information so obtaining a valid mortality rate is not yet possible. The mortality rate is therefore listed as ‘N/A’ until such time as data forms can be revised, and retrospective analyses conducted to provide links for historic data. The need for a link between the GEN-2 form and the PS-3 form was highlighted by Clarke and Gilman (2015) and has subsequently been agreed by the Commission (Anon, 2015b). The change on forms (set number and/or beginning of set date and time needs to be included in the GEN-2 form) is yet to be implemented but should be in place for data from 2017. This will involve including set number on the GEN-2 form, or beginning of set date and time, to link it with data recorded on the PS-3 form per set.

1.4 Spatially explicit BDEP

The fisheries have been aliased and represent a combination of flags, but have been separated into the two major gear types (longline and purse seine). For the spatially explicit information summary, data are reported at a 5x5 degree resolution (Figure 1 shows the spatial coverage of the observer data).

The observed and estimated captures/mortalities for key bycatch species groups by year and area for the WCPFC longline fishery are provided in Table 4. The observed and estimated captures/mortalities for key bycatch species groups by year and area for the WCPFC purse seine fishery are provided in Table 5. Capture rate has been defined for longline using number of captures per 1000 hooks. Capture rate has been defined for purse seine using number of captures per set. The NOTES for these tables are essentially the same as the notes for Table 2 and 3 respectively, although additional NOTES for Tables 4 and 5 cover:

- Latitude is in decimal degrees and represents the midpoint of the 5° latitude cell. Positive values are for the northern hemisphere and negative values are for the southern hemisphere;
- Longitude is in decimal degrees and represents the midpoint of the 5° Longitude cell. Positive values are for the eastern hemisphere and negative values are for the western hemisphere;
- Some examples for latitude/longitude are:
 - -7.5, 172.5 represents 5°-10°S 170°-175°E
 - 17.5, -147.5 represents 15°-20°N 145°-150°W.

3. COMMENTS AND RECOMENDATIONS

The compilation of the ROP and additional approved observer programme data into the BDEP templates has been completed for 2013-2015. The trial has highlighted several issues to address, noting that for some of them solutions are already in progress. In particular the trial has extended ongoing work to improve the utility and accessibility of observer data. The summary also addresses requests from international organisations for summaries of species of special interest bycatch in the WCPO (e.g. the upcoming FAO bycatch review). Further, subject to agreement with other RFMOs, it provides the basis for whole of population range scale analyses for species of special interest. Overall, it is recommended that the BDEP trial continue for 2017, subject to resourcing. The following comments and recommendations identify specific work for the future years of the BDEP trial for the consideration of the SC and Commission:

1. Estimating mortality rates for purse seine - Information on the condition of the landed and released catch (e.g. CONDITION) collected by observers on the GEN-2 form needs to be linked to set information so that mortality/release rates can be calculated for purse seine. This recommendation has previously been agreed by the Commission (Anon, 2015b) and will be actioned in late 2016/early 2017. Note that retrospective analyses are required to make the link for historical data.
2. Providing tables of observer effort by 5°x5°. We did consider this option but the main reasons for not providing them were: (i) the size of the tables would have made it too big for a paper, and (ii) the current public domain aggregated catch and effort data (see <https://www.wcpfc.int/node/4648>) already provides

a high proportion of coverage of the total effort, noting that some data are not public domain due for instance the three-vessel rule). The recommendation to SC12 is therefore to seek advice to produce a table of total fishing and observer effort by 5°x5° and have this published on the WCPFC web site.

3. Where observer programmes do not provide distinct vessel names to identify trips seek advice from the respective CCMs on how to proceed with the filtering of the data according to the WCPFC data rules (i.e. data representing the activities of less than three vessels) to ensure data that may not have been excluded under normal circumstances are available for future BDEP reports.
4. The scripts for extracting the tables in this paper have been developed and should be relatively easy to re-extract data in future years. There will need to be continual auditing and data quality control work to identify and resolve issues in the data and this work is currently supported through the WCPFC ROP data management project. However, there would need to be consideration of additional resources to support any additional work if there were plans to extend the current scope of the BDEP tables.
5. To allow estimates of catch to be determined in number of specimens and in weight (kg, tonnes), length-length and length-weight relationships need to be updated for all where they currently exist, and developed for species for which they do not currently exist.
6. To improve the quality of information available, the BDEP protocol should in future include seabirds at the species level where possible. There is also a need to improve the species guides for observers and identification at sea to ensure higher quality data are available for reporting.
7. To improve the utility of the information available, the BDEP protocol should be expanded to include marine mammals, to the species level where possible.
8. Noting that this year's trial of BDEP has been in the form of a separate paper, an overarching recommendation arising from the above is that in future, the BDEP tables be published on the WCPFC web site (at <http://www.wcpfc.int/tuna-fishery-data>) and that any developments with the BDEP tables are addressed within the annual generic paper on data gaps and related issues (e.g. see Williams, 2016).
9. In addition to addressing the above recommendations, one of the obvious next steps for BDEP is to attempt to reconcile information at an ocean basin scale. The Pacific provides a unique opportunity to undertake this work at least for the purse seine fishery, with the IATTC equivalent data in the public domain and web-accessible, the WCPFC data now in the public domain in a useful format, and CCSBT collating equivalent data internally. Accordingly an additional recommendation for 2017 would be for WCPFC to be tasked with undertaking a regional BDEP compilation trial for purse seine, in co-operation with the IATTC and CCSBT Secretariats.

In summary, SPC and the ABNJ-GEF Tuna Project recommend that this work be continued and resourced as a positive step toward improving the quality of and access to bycatch data within and across RFMOs. There are several options for the scale of future work from simply re-running the existing scripts in 2017 and placing the outputs tables on the website (4 and 8 above), through to resourcing the completion of all the additional tasks identified.

4. ACKNOWLEDGEMENTS

This analysis was an initiative of and funded by the ABNJ (Common Oceans) Tuna Project. A special thanks to the observers, observer trainers and national agency staff who ensure observer data are available through the ROP. Without their efforts such analyses would not be possible.

6. TABLES

Table 1a. Total fishing and observed effort per year and fishery

ROP Observer data

Calendar Year	Fishery	Total (LONGLINE: PURSE SEINE: Sets)	Effort Hooks	Total observed effort	ROP Observer Coverage
2013	L	1,009,980,400		12,202,226	1.2%
2014	L	1,042,549,430		12,129,370	1.2%
2015	L	991,184,990		6,872,992	0.7%
Separator					
2013	S	54,298		36,833	67.8%
2014	S	55,509		32,091	57.8%
2015	S	45,789		21,507	47.0%

Notes

1. According to the WCPFC Regional Observer Programme (ROP) Database, noting that the full observer database available to SPC has better coverage (see Table 1b).
2. There is some data entry backlog mainly in 2014 and 2015.
3. Observer coverage does not take into account those cells removed according to WCFPC public domain data rules.

Table 1b. Total fishing and observed effort per year and fishery, including additional non-ROP observer data held by SPC

Complete SPC observer data holdings

Calendar Year	Fishery	Total (LONGLINE: PURSE SEINE: Sets)	Effort Hooks	Total observed effort	Observer Coverage
2013	L	1,009,980,400		19,216,819	1.9%
2014	L	1,042,549,430		16,851,867	1.6%
2015	L	991,184,990		8,838,493	0.9%
Separator					
2013	S	54,298		43,475	80.1%
2014	S	55,509		36,829	66.3%
2015	S	45,789		26,518	57.9%

Notes

1. There is some data entry backlog mainly in 2014 and 2015.
2. Observer coverage does not take into account those cells removed according to WCFPC public domain data rules.

Table 2. Observed and estimated captures/mortalities for key bycatch species groups by year for the WCPFC LONGLINE fishery

Calendar Year	Fishery	Species Category	Species (or group)	Number of vessels with observer data	Observed Captures (number)	Observed Capture Rate (per 1000 hooks)	Observed Mortalities (number)	Observed Mortality rate (per 1000 hooks)	Observed Live Releases

NOTES

1. The source data is the WCPFC Regional Observer Programme (ROP) Database.
2. There is a backlog of data yet to be provided and processed, mainly for 2014 and 2015.
3. The WCPFC Data rules (<https://www.wcpfc.int/doc/data-02/rules-and-procedures-protection-access-and-dissemination-data-compiled-commission>) related to the dissemination of WCPFC data in the public domain have been applied; that is, summarized data representing the activities of less than three vessels have been removed.
4. Where the observed capture rate is '0.000000' but the number of captures is greater than zero (0), this means that the capture rate is smaller than the significant figures provided in this table (i.e. <0.0000005). This also applies to the observed mortality rates and number of mortalities.
5. The addition of the mortalities and live releases will often not equal the captures (i.e. interactions with the gear) since the observer (for one reason or the other) may not have recorded the FATE and the CONDITION of every encounter.

Table 3. Observed and estimated captures/mortalities for key bycatch species groups by year for the WCPFC PURSE SEINE fishery

Calendar Year	Fishery	Species Category	Species (or group)	Number of vessels with observer data	Number of sets observed	Observed Captures (number)	Observed Capture Rate (per set)	Observed Mortalities (number)	Observed Mortality rate (per set)	Observed Live Releases

NOTES

1. The source data is the WCPFC Regional Observer Programme (ROP) Database;
2. There is a backlog of data yet to be provided and processed, mainly for 2014 and 2015;
3. The WCPFC Data rules (<https://www.wcpfc.int/doc/data-02/rules-and-procedures-protection-access-and-dissemination-data-compiled-commission>) related to the dissemination of WCPFC data in the public domain have been applied; that is, summarized data representing the activities of less than three vessels have been removed;
4. Where the observed capture rate is '0.000000' but the number of captures is greater than zero (0), this means that the capture rate is smaller than the significant figures provided in this table (i.e. <0.0000005). This also applies to the observed mortality rates and number of mortalities;
5. The sum of the mortalities and live releases will often not equal the captures (i.e. interactions with the gear) since the observer (for one reason or the other) may not have recorded the FATE and the CONDITION of every encounter;
6. For the purse seine fishery, information on the condition of the landed and released catch (e.g. mortalities) are collected by observers on the GEN-2 form only which does not currently align to the set information so obtaining a valid mortality rate is not yet possible. The mortality rate is therefore listed as 'N/A' until such time as data forms can be revised. The need for a link between the GEN-2 form and the PS-3 form was highlighted by Clarke and Gilman (2015) and has subsequently been agreed by the Commission (Anon, 2015). The change on forms is yet to be implemented but should be in place for data from 2017.

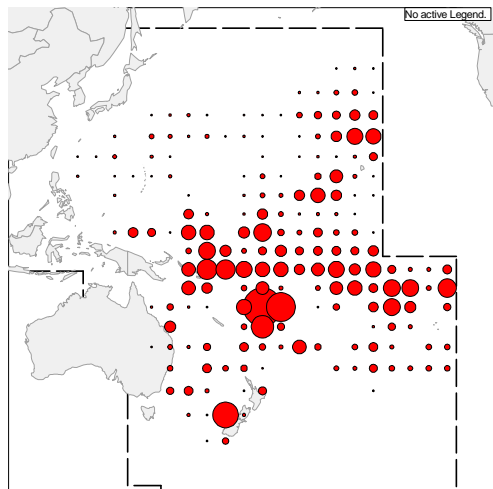

Figure 1. Distribution of total effort in the WCPFC longline fishery in 2013/2014 (top), total observed effort in the WCPFC ROP database (middle) and, total observed effort in the SPC observer data holdings (bottom)

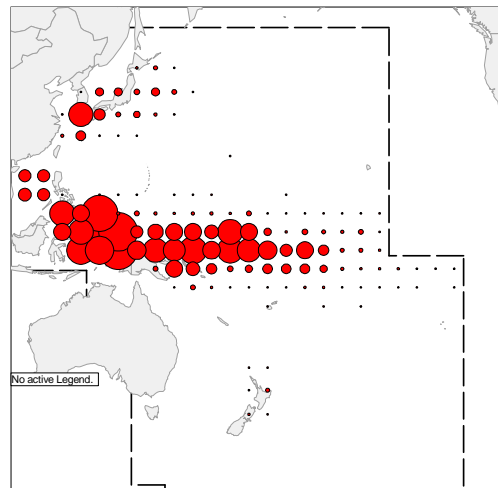

Figure 2. Distribution of total effort in the WCPFC purse seine fishery in 2013/2014 (top), total observed effort in the WCPFC ROP database (middle) and, total observed effort in the SPC observer data holdings (bottom)

Table 4. Observed and estimated captures/mortalities for key bycatch species groups by year and area for the WCPFC LONGLINE fishery

NOTES

1. [See TABLE 2 NOTES]
2. Latitude is in decimal degrees and represents the midpoint of the 5° latitude cell. Positive values are for the northern hemisphere and negative values are for the southern hemisphere;
3. Longitude is in decimal degrees and represents the midpoint of the 5° Longitude cell. Positive values are for the eastern hemisphere and negative values are for the western hemisphere;

Table 5. Observed and estimated captures/mortalities for key bycatch species groups by year and area for the WCPFC PURSE SEINE fishery

Calendar Year	Fishery	LATITUDE (5° cell)	LONGITUDE (5° cell)	Species Category	Species (or group)	Number of vessels with observer data	Number of sets observed	Observed Captures (number)	Observed Capture Rate (per set)	Observed Mortalities (number)	Observed Mortality rate (per set)	Observed Live Releases

NOTES

1. [See TABLE 3 NOTES]
2. Latitude is in decimal degrees and represents the midpoint of the 5° latitude cell. Positive values are for the northern hemisphere and negative values are for the southern hemisphere;
3. Longitude is in decimal degrees and represents the midpoint of the 5° Longitude cell. Positive values are for the eastern hemisphere and negative values are for the western hemisphere;
