

## REPORT ON THE IOTC FISHERIES STATISTICS RECORD

Prepared by IOTC Secretariat

This document summarises the information received in accordance with IOTC Resolution 08/01 (previously 05/01 and 98/01) *Mandatory statistical requirements for IOTC Members*, IOTC Resolution 05/05 *Concerning the conservation of sharks caught in association with fisheries managed by the IOTC*, IOTC Resolution 06/04 *On reducing incidental bycatch of seabirds on longline fisheries* and IOTC Resolution 09/06 *On Marine turtles*.

### Background

The mandatory fisheries statistics comprise three different types of information:

- Nominal catches which are highly aggregated statistics for each species estimated per fleet, gear and year for a large area. If these data are not reported the Secretariat estimates a total catch (eg. CATCH 2007) from a range of sources including:
  - Partial catch and effort data
  - Data in the FAO FishStat database
  - Catches estimated by the IOTC from data collected through port sampling
  - Data published through web pages or other means
  - Data reported by other parties on the activity of vessels (IOTC Resolution 07/04) or on imports of bigeye tuna from vessels under the flag concerned (IOTC Resolution 01/06)
- Catch and effort data: refer to the fine-scale data – usually from logbooks, and reported per fleet, year, gear, type of school, month, grid and species. Information on the use of fish aggregating devices (FADs) and supply vessels is also required.
- Size data: Size frequency distributions of IOTC species per fleet, year, gear, type of school, quarter and 5 degrees square areas.

The Secretariat keeps databases containing the above data and all correspondence concerning data requests, data submissions and other related issues.

### Availability of fisheries data for the assessments of Indian Ocean tuna stocks

Figures 1-5 (page 10) show the amount of statistics available for the year 2008 for the five main IOTC species, before the deadline of reporting (June 2009) and at the end of 2009.

### Submission of fisheries data for 2008

The status of reporting on fisheries information on the tuna and tuna-like species for the year 2008 is shown in Table 1. Note that the approximate catches shown are indicative only and may not equal exactly the best scientific estimates of the catches as adopted by the IOTC Scientific Committee.

The timeliness of reporting for IOTC CPC is shown in Table 2.

### Submission of bycatch data for 2008

The status of reporting on bycatch data for the year 2008 is shown in Table 3. No bycatch data has been received from non-members.

**Note:** In most cases, there is no independent way of verifying data submitted to the Secretariat, by CPCs.

**Table 1. IOTC fisheries statistics (Resolution 08/01). Status of reporting for the year 2008. See key below.**

**a) IOTC Contracting Parties**

IOTC CONTRACTING PARTIES	GEAR	Approximate CATCH 2008 (x1000 t)	Dataset					COMMENTS
			NC	CE	SF	FAD	SUP	
Australia	PS	5.8	✓	✓	✓	-	-	NC and CE data reported to IOTC standards but not fully for release due to current Australian data confidentiality policy. Longline SF data not reported by IOTC grid. SF data for other gears not collected due to low catch levels of tuna and billfish
	LL		✓	✓	⊘	-	-	
	OT		✓	✓	⊙	-	-	
Belize	LL	0.6	✓	✓	⊘	-	-	Size data do not refer to individual fish lengths
China Taiwan,China	LL	6.6	✓	✓	⊙	-	-	CE data not available for the whole of 2008. SF data will be provided in the near future
	LL	37.6	✓	⊘	⊙	-	-	
	LLs	27.8	✓	⊙	⊙	-	-	
Comoros	OT	11.3	⊙	⊙	⊙	-	-	Comoros has never reported statistics to the IOTC (catches from the FAO database)
Eritrea	OT	0.9	⊙	⊙	⊙	-	-	Eritrea has never reported statistics to the IOTC (catches from the FAO database)
EU	PS	206.2	✓	✓	✓	⊙	⊙	CE incomplete for some EU fleets (CE not reported for some species or not reported by IOTC grid). SF not reported for some EU fleets or incomplete (only available for swordfish).
	LL	8.7	✓	⊘	⊘	-	-	
	OT	0.2	⊙	⊙	⊙	-	-	
France (OT)	PS	10.1	✓	✓	✓	-	-	
	OT	0.8	⊙	⊙	⊙	-	-	
Guinea	LL	0.9	⊙	⊙	⊙	-	-	Guinea has not reported statistics to the IOTC since 2004 (catches estimated by the Secretariat)
India	LL	12.7	⊙	⊙	⊙	-	-	
	OT	138.1	✓	⊙	⊙	-	-	
Indonesia	LL	43.2	✓	⊙	⊘	-	-	NC may not be reported for vessels operating outside Indonesia; SF for not available per IOTC grid.
	OT	171.6	✓	⊙	⊙	-	-	
Iran	PS	4.9	✓	⊙	⊙	⊙	⊙	Around 700 gillnet vessels operate outside the EEZ (some having LOA over 24m)
	OT	138.8	✓	⊙	⊙	-	-	
Japan	PS	5.4	✓	✓	⊙	⊙	-	SF data will be provided in the near future
	LL	35.5	✓	✓	⊙	-	-

Key Table 1

- NC Nominal catch Data (total catches per species, gear, year and IOTC Area)
- CE Surface (PS and OT): catch (weight) and effort (fishing days) data by 1° grid area and month strata, per species and gear.  
Longline (LL; LLs): catch (numbers and weight) and effort (number of hooks) by 5° grid area and month strata, per species.  
Information recorded under PS and/or LL refers, totally or partially, to vessels having length overall above 24 meters.
- SF Length data, including the total number of fish measured, per 5° grid area and month, by species, gear and fishing mode
- FAD Total number and type of Fish Aggregating Devices operated by the fleet by 5° grid area and month basis (applies only to industrial purse seiners)
- SUP Number, characteristics and levels of activity of supply vessels (of tuna purse seiners)
- GEAR **PS** Industrial Purse seine (above 24 meters length overall 'LOA')  
**LL** Industrial Longline (having LOA greater than 24 meters in most cases)  
**LLs** Small Longlines (having LOA between 15m and 24m in most cases)  
**Res** Research/Training vessels  
**OT** refers to gears other than industrial purse seines and longlines (vessels with LOA over 24 m are not likely to occur)

✓	Data reported by IOTC standards
⚡	Data reported but not to IOTC standards (e.g. catches and effort or size frequency not reported per month or one degree or five degree square area)
●	No data received
-	No data expected

**Table 2.** IOTC fisheries statistics (Resolution 08/01). Timeliness of reporting data for the year 2008.

Key Table 3

Sharks	Total catches of sharks reported
Sea Birds	Total by-catch of sea birds (or CPUE) reported
Marine Turtles	Total by-catch of marine turtles (or CPUE) reported
<b>GEAR</b>	
	<b>PS</b> Industrial Purse seine (above 24 meters length overall 'LOA')
	<b>LL</b> Industrial Longline (having LOA greater than 24 meters in most cases)
	<b>OT</b> refers to gears other than industrial purse seines and longlines (vessels with LOA over 24 m are not likely to occur)
✓	Data reported by IOTC standards
⚡	Data reported but not to IOTC standards (e.g. catches and effort or size frequency not reported per month or one degree or five degree square area)
	(blank) No data received

Figures 1-5: Amount of statistics available for the year before the assessments\* of the five main IOTC species:

Nominal catches: amount of nominal catches available (Reported) versus those not reported (Estimated by the IOTC Secretariat)

Catch and effort: proportion that the nominal catches from strata for which catch-and-effort data are available made out of the total nominal catches estimated

Length frequency: proportion that the nominal catches from strata for which length frequency data are available made out of the total nominal catches estimated

\*Refers to the amount of statistics available for the year 2008, to be used in the assessments conducted by the IOTC WP in 2009
