## Introduction

Le 23 novembre 2010, le Ministre des pêches du Mozambique a adressé au Secrétariat de la CTOI une demande d'accession au statut de partie coopérante non contractante. L'objet de ce rapport est de fournir les informations requises par la résolution 03/02 de la CTOI « Sur les critères visant à l'octroi du statut de partie non-contractante coopérante ». L'article 3 de cette résolution prévoit que les parties non contractantes qui demandent à accéder au statut de partie coopérante non contractante fournissent les informations suivantes avant que leur candidature ne soit examinée par la Commission :

- Données historiques sur les pêcheries dans la zone de compétence de la CTOI (si disponibles), y compris les captures nominales, les nombres/types de navires, les noms des navires de pêche, l'effort de pêche et les zones de pêche.
- L'ensemble des données que les parties contractantes doivent soumettre à la CTOI au titre des résolutions adoptées par la Commission.
- Des informations sur les activités de pêche actuelle dans la zone de compétence de la CTOI, y compris les nombres de navires et leurs caractéristiques.
- Des informations sur les programmes de recherche éventuellement conduit dans la zone de compétence de la CTOI et sur les résultats de ces programmes.

## Résumé

La senne tournante et la palangre sont les deux principales techniques de pêche utilisées par le Mozambique pour la pêche thonière. Ces activités sont réalisées par des flottes pêchant en eaux lointaines, qui opèrent dans la ZEE jusqu'à 12 milles marins du rivage, de janvier à décembre.

La pêche à la senne se déroule principalement entre les parallèles 10°32' et 20° sud. La flotte de senneurs est composée de navires battant pavillon de la France, de l'Espagne et des Seychelles. La pêche à la palangre a lieu entre 20° et 26°52' sud, et en particulier au sud du 25° parallèle sud. En ce qui concerne la flotte de senneur, la principale période de pêche s'étale entre mars et juin. La flotte de palangriers, elle, opère de janvier à décembre dans les eaux du Mozambique avec une période de pointe entre décembre et février. Au cours des cinq dernières années, la flotte de palangriers était composée de navires de Belize, du Panama, du Cambodge, du Honduras, du Japon, de la Chine, de la Corée, de l'Espagne et de Taïwan, Chine. La pêcherie emploie uniquement des travailleurs étrangers. Les captures sont conservées à bord et transférées vers des navires cargos ou débarquées dans des ports étrangers, principalement aux Seychelles, à Madagascar, à Maurice et en Afrique du Sud. La flotte thonière ne fait jamais escale dans les ports du Mozambique pour débarquer ses captures mais uniquement pour les briefings et les inspections préliminaires (flotte japonaise).

Au cours des 10 dernières années, les captures totales dans les eaux du Mozambique ont varié de 948 t à 17 470 t par an<sup>1</sup>. Pour la période 2005/2010, respectivement 264 et 486 licences ont été attribuées à des senneurs et à des palangriers, soit une moyenne de 125 licences thonières par an. Le nombre de palangriers opérant dans la ZEE du Mozambique a fortement diminué depuis 2007. En 2010, un total de 31 entreprises de pêche étaient autorisées à pêcher les grands pélagiques.

La composition des captures de la flotte de senneurs est d'à peu près deux tiers de listao (SKJ) et un peu moins d'un tiers d'albacore (YFT). La composition des captures des palangriers, exprimée en nombre de poissons, est de 65 % d'albacore, 14 % de germon, 13 % de patudo et 3 % d'espadon (source : base de données de la CTOI, 1983-2006).

---

<sup>1</sup> Source : Lichua, I. *et al.* (2004) Profile of the Fisheries Sector in Mozambique: with emphasis on tuna fisheries.

Entre 1976 et 1979, plusieurs programmes de recherche ont été mis en place dans le but de développer la pêche thonière à la palangre et à la canne. Les résultats de ces programmes ont montré la faisabilité du développement d'une flotte nationale de cinq à sept palangriers. Chaque navire pourrait capturer environ 3500 t par an (1100 t de thon, 1900 t de requins, et 500 t d'autres poissons, principalement des portes-épée). Les captures estimées d'une telle flotte seraient d'environ 17 500 à 24 500 t par an. Depuis 1979, aucun programme de recherche n'a été réalisé dans le secteur de la pêche thonière au Mozambique.

### Contexte / informations générales sur les pêcheries

Le Mozambique est situé dans le sud-est du continent africain et présente la troisième plus longue façade maritime de ce continent. Les points les plus au nord et les plus au sud de ses côtes sont situés respectivement aux latitudes 10°28'sud et 26°51' sud. Les côtes du Mozambique mesurent 2780 km et sont caractérisées par une grande variété d'habitats, comprenant des plages, des récifs coralliens, des systèmes estuariens, des baies, des mangroves et des herbiers marins. Le canal du Mozambique sépare le Mozambique de l'île de Madagascar et mesure 400 km de large à son point le plus étroit. Le plateau continental mesure en moyenne 15 à 25 km de largeur mais peut parfois se rétrécir jusqu'à environ 100 m (au large de Pemba, dans le nord du Mozambique) ou s'élargir jusqu'à plus de 145 km (banc de Sofala) dans la partie centrale du pays. La distribution et l'abondance des ressources vivantes aquatiques, ainsi que les méthodes de pêche utilisées pour les exploiter, dépendent étroitement des caractéristiques géographiques des côtes.

Le secteur de la pêche joue un rôle important dans l'économie mozambicaine, à la fois en termes de subsistance, de revenus et de sécurité alimentaire pour les communautés côtières de pêcheurs et également en termes de secteur économique représenté par la pêche semi industrielle et industrielle. Le secteur de la pêche est divisé en trois composantes principales : le secteur industriel (47 % des captures déclarées), le secteur semi industriel (20 %) et le secteur artisanal/de subsistance (33 %). On estime à plus de 100 000 le nombre de personnes participant directement au secteur des pêcheries artisanales, utilisant plus de 15 000 bateaux de différents types dans les sept provinces côtières. Combinées, l'agriculture, la pêche et les forêts représentaient 21,6 % du PNB en 2004. Les crevettes représentent le troisième produit d'exportation national pour un revenu total de 91,8 millions de dollars. L'ensemble des pêcheries est réglementé par le *Fisheries Act* de 1990 et par le *Marine Fisheries Regulations* de 2003, ainsi que ses décrets subsidiaires.

Les principales responsabilités du Ministère des pêches, en tant qu'organe politique, concernent l'élaboration de politiques et de stratégies de développement de la pêche et leur application par le biais de plans de développement, ainsi que la coordination de leur application par le biais du contrôle et du suivi des performances des divers sous systèmes et la création d'un environnement économique favorable aux opérateurs et aux nouveaux investisseurs.

Le sous système « gestion des pêches » comprend les institutions suivantes :

- L'Institut National de Recherche Halieutique (*IIP*), dont le rôle est de surveiller la durabilité de la ressource.
- La Direction Nationale de l'Administration des Pêches (*DNAP*), qui fait partie du Ministère des pêches et dont l'objectif est de délivrer les licences de pêche et de suivre et surveiller les activités de pêche.
- L'Institut National d'Inspection du Poisson (*INIP*), dont le rôle est de garantir la qualité des produits de la pêche exportés ou importés pour la consommation intérieure, conformément aux règlements sanitaires de la législation mozambicaine et internationale.

Le sous système « promotion du développement de la pêche » est composé des institutions suivantes :

- L'Institut pour le développement de la pêche à petite échelle (IDPPE), qui s'attache à promouvoir le développement de la pêche à petite échelle, en particulier dans le but de réduire la pauvreté et d'améliorer le niveau de vie des communautés de pêcheurs artisanaux.
- L'Institut National pour le Développement de l'Aquaculture (INAQUA), dont l'objectif est la promotion de l'aquaculture.
- Le Fond de Promotion de la Pêche (FFP) dont l'objectif est de gérer les ressources financières destinées aux investissements publics dans le secteur de la pêche et d'accorder des prêts au développement.
- L'école de la pêche (EP) qui dispense des formations spécialisées de base et plus avancées pour le développement du secteur, ainsi que des sessions de formation de courte durée.

Le Ministère des pêches gère le secteur des pêches par le biais de la Direction Nationale des pêches (ADNAP). En ce qui concerne la pêche thonière, le principal instrument de gestion est la délivrance de licences. Pour le moment, le Ministère des pêches n'a pas fixé de limite au nombre total de navires attributaires de licences.

En 1996, une Commission de l'administration des pêches (CAP) a été créée pour améliorer la participation du secteur privé et des communautés de pêcheurs dans les processus de prise de décision. Elle rassemble des représentants de l'Administration publique des pêches et du secteur de la pêche (industrielle, semi industrielle et artisanale). Ce forum a un rôle de conseil auprès du Ministre et discute et analyse les questions telles que les quotas et les allocations par navires, l'étendue et la durée des périodes de fermeture, l'état d'exploitation des principales ressources et les recommandations de mesures de gestion proposées par le secteur de la recherche halieutique. Ainsi, la décision finale sur les questions administratives concernant la pêche est prise par les autorités des pêches après consultation de ce forum. Les questions régionales et internationales sont également discutées dans ce forum avant qu'une décision soit prise au niveau national.

Le régime de gestion de la pêcherie thonière est toujours en cours d'élaboration et le Mozambique prévoit de développer une flotte de pêche thonière. En parallèle à notre candidature à la CTOI, un plan de gestion de la pêcherie thonière est discuté depuis deux ans.

### **Licences de pêche**

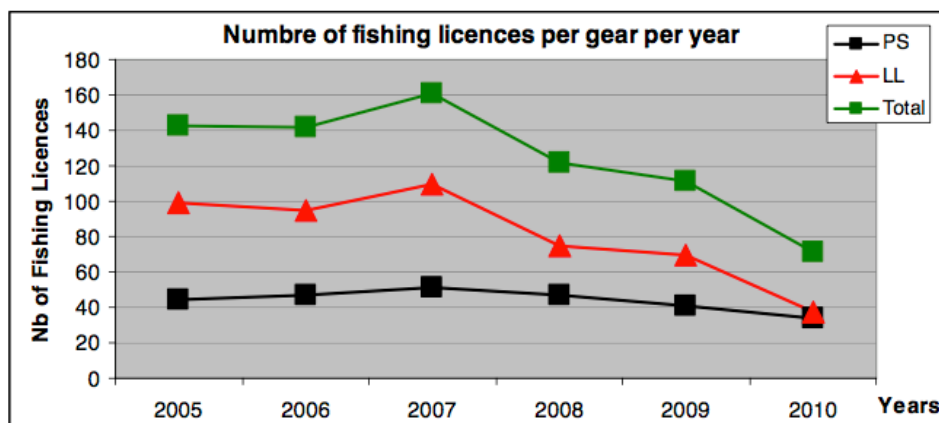

Pour la période 2005/2010, respectivement 264 et 486 licences ont été attribuées à des senneurs et à des palangriers, soit une moyenne de 125 licences thonières par an délivrées par la Direction Nationale de l'Administration des Pêches.

Année	Senneurs		Palangriers	
	Nb licences	Pavillon	Nb licences	Pavillon
2005	44	France, Espagne, Seychelles, Italie	99	Portugal, Taïwan, Chine, Chine, Espagne, Indonésie, Corée, Géorgie, Madagascar, Philippines, Japon
2006	47	France, Espagne, Seychelles, Italie	95	Portugal, Taïwan, Chine, Chine, Espagne, Indonésie, Corée, Géorgie, Philippines, Japon
2007	51	France, Espagne, Seychelles, Italie, Indonésie	110	Taïwan, Chine, Chine, Espagne, Indonésie, Corée, Géorgie, Philippines, Japon
2008	47	France, Espagne, Seychelles, Italie	75	Portugal, Espagne, Chine, Corée, Philippines, Japon, Royaume Uni
2009	41	France, Espagne, Seychelles, Italie	70	Portugal, Chine, Espagne, Corée, Philippines, Japon
2010	34	France, Espagne, Seychelles, Italie	37	Portugal, Chine, Espagne, Corée, Japon, Namibie, Royaume Uni

**Tableau 1.** Nombre de licences de pêche dans la ZEE mozambicaine attribuées par années et par pays attributaire, entre 2005 et 2010 (Source : Rapports annuels de l'ADNAP).

Pour la période 2005-2010, le nombre de licences de pêche attribuées à des senneurs opérant dans les eaux du Mozambique varie entre 34 et 47 et reste plus ou moins constant sur la période. Pour les palangriers, le nombre de licences varie entre 37 et 110 et diminue depuis 2008.

En 2010, la France, l'Espagne, les Seychelles et l'Italie ont été attributaires de licences de pêche pour leurs senneurs, tandis que le Portugal, la Chine, l'Espagne, la Corée, le Japon et la Namibie ont reçu des licences pour leurs palangriers.

**Figure 1.** Nombre de licences de pêche dans la ZEE mozambicaine attribuées à des thoniers étrangers entre 2005 et 2010 (Source : Rapports annuels de l'ADNAP).

L'accord de pêche entre l'UE et le Mozambique prévoit des opportunités de pêche pour 89 navires européens dans les eaux du Mozambique (44 senneurs et 45 palangriers).

En 2010, pour la flotte de senneurs, 13 entreprises ont été autorisées à pratiquer la pêche aux grands pélagiques. Pour la flotte de palangriers, 18 entreprises ont été autorisées à pêcher les espèces sous mandat de la CTOI. (voir annexe – Liste des licences de pêche pour 2010).

## Prises et effort (par espèces et engins)

### Tous navires de pêche – Navires étrangers

Année	Nb navires	Listao	Germon	Patudo	Albacore	Espadon	Makaire noir	Thons	Total
2004									17470
2005	143								5629
2006	142								6668
2007	161	641	541	350	3402	218	1	428	5581
2008	122	2550	341	322	2647	209	9	471	6549
2009	111	1942	106	173	824	721	9	538	4313
2010 <sup>2</sup>	71	764	99	166	1267	600	27	603	3811 <sup>3</sup>

**Tableau 2.** Nombre de navires de pêche et captures annuelles par espèces principales dans les eaux du Mozambique, entre 2004 et 2010 (Source : Rapports annuels de l'ADNAP).

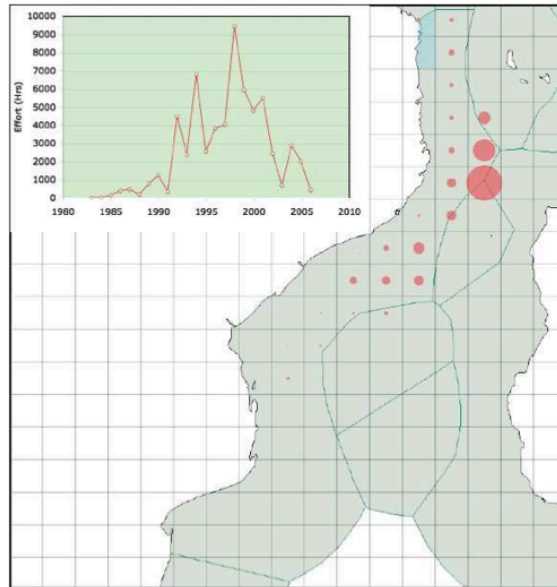

**Figure 2.** Captures totales déclarées de thons et d'espèces apparentées dans la ZEE mozambicaine attribuées à des thoniers étrangers entre 2004 et 2010 (Source : Rapports annuels de l'ADNAP).

### Senneurs

La distribution de l'effort de pêche total pour la senne dans les eaux du Mozambique est illustrée entre 1983 et 2006 dans la figure 3 (source : base de données de la CTOI, Zone de forage exploratoire 1 EIA, Pêcheries commerciales, JDK Wilson, mai 2008).

<sup>2</sup> Les données de captures 2010 sont incomplètes car les prises de la flotte européenne ne sont pas encore disponibles.

<sup>3</sup> Makaïre rayé 16 t, voilier 5 t, requins 291 t.

**Figure 3.** Distribution de l'effort de pêche à la senne dans la ZEE du Mozambique, entre 1983 et 2006.

**Figure 4.** Évolution des captures annuelles déclarées par la flotte de senneurs dans la ZEE du Mozambique entre 1983 et 2006 et distribution des captures dans la ZEE mozambicaine.

La composition des captures de la flotte de senneurs est d'à peu près deux tiers de listao (SKJ) et un peu moins d'un tiers d'albacore (YFT).

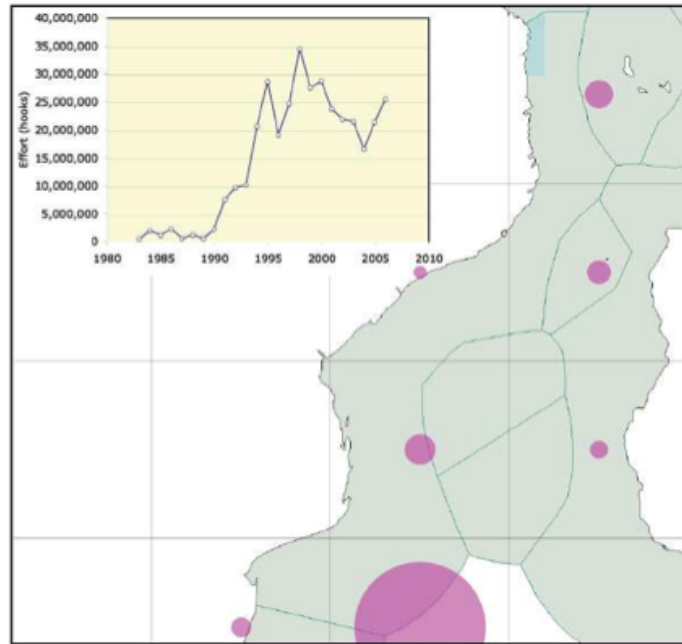

#### Palangriers

La distribution de l'effort de pêche total pour la palangre dans les eaux du Mozambique est illustrée entre 1983 et 2006 dans la figure 3 (source : base de données de la CTOI, Zone de forage exploratoire 1 EIA, Pêcheries commerciales, JDK Wilson, mai 2008).

L'effort de pêche de la flotte palangrière se concentre dans la partie australe de la ZEE mozambicaine durant les mois de décembre, janvier et février.

Les captures de la flotte palangrière dans la ZEE du Mozambique entre 1983 et 2006 [sic] sont présentées dans la figure 6, en nombre de poissons (source : base de données de la CTOI, Zone de forage exploratoire 1 EIA, Pêcheries commerciales, JDK Wilson, mai 2008). Les plus fortes captures furent enregistrées en 1993 et, entre 1993 et 2003, les captures ont fluctué entre 300 000 et 450 000 poissons par an.

**Figure 5.** Distribution de l'effort de pêche à la palangre dans la ZEE du Mozambique, entre 1983 et 2006.

**Figure 6.** Évolution des captures annuelles déclarées par la flotte de palangriers dans la ZEE du Mozambique entre 1983 et 2004.

### Structure de la flotte

Le nombre de palangriers opérant dans la ZEE du Mozambique a significativement diminué depuis 2007 (110 navires attributaires de licence), avec seulement 37 navires en 2010. Les palangriers japonais sont les principaux attributaires de licences mozambicaines (14), suivis de l'Espagne (avec 9 navires, dans le cadre du EU/Moz FPA).

Les palangriers asiatiques font entre 48 et 51m de long et ont un tonnage brut compris entre 379 et 441. Les palangriers européens font entre 24 et 41m de long pour un tonnage brut entre 198 et 593.

La flotte de senneurs étrangers a fluctué de 34 à 51 navires entre 2005 et 2010. La longueur de ces navires varie entre 66 et 101m tandis que le tonnage brut varie entre 2110 et 4406.

## Application des recommandations du Comité scientifique

*Pas applicable pour le moment.*

## Écosystèmes et captures accessoires

*Aucune information disponible.*

## Collecte des données nationales et systèmes de traitement

- Collecte et vérification des données des fiches de pêche.
- Système de surveillance des navires (y compris date de début et état d'application).
- Programme d'observateurs scientifiques (y compris date de début et état d'application, nombre d'observateurs et couverture par type d'engin).
- Programme d'échantillonnage au port (y compris date de début et état d'application).
- Débarquements/transbordements (y compris date de début et état d'application).

Les systèmes nationaux de collecte et de traitement des données concernant la pêche thonière sont présentés dans l'annexe « Termes, conditions et besoins pour la pêche thonière industrielle dans les eaux du Mozambique ».

## Programmes de recherche nationaux

L'Institut de recherches halieutiques (IIP), sous la tutelle du Ministère des pêches, a pour responsabilité toutes les activités de recherche concernant les sujets relatifs à la pêche, à l'environnement aquatique et à l'aquaculture. L'IIP ne dispose pas de navire de recherche mais plusieurs campagnes de recherche démersales et océanographiques ont été conduites dans le cadre d'une coopération avec des pays tiers tels que la Norvège, l'Union soviétique, la République démocratique d'Allemagne, le Portugal etc.

Entre 1976 et 1979, plusieurs programmes furent mis en place pour développer la pêche thonière en utilisant les techniques de pêche à la palangre ou à la canne. Les résultats de ces programmes sont décrits ci-dessous (Simões, 1984).

Plusieurs essais furent réalisés pour développer une industrie de la pêche thonière nationale, basés notamment sur des expériences de pêche pour déterminer les taux de capture à la palangre et à la canne (Simões, 1984). Entre 1976 et 1979, des activités de pêche expérimentale à la palangre furent réalisées au moyen de sept navires de recherche soviétiques. Les taux de capture étaient en général bons et plus élevés dans le nord (au nord de Quelimane) et durant l'hiver, sauf dans la région centrale (tableau 7). Les espèces de thons capturées étaient principalement de l'albacore et, dans une moindre mesure, du thon obèse et du germon. Globalement, les poissons à rostre représentaient environ 8 % des captures totales et les requins étaient abondants, en particulier dans le sud (au sud d'Inhambane).

Sur la base de ces résultats, Simões (1984) considère qu'une flotte nationale de cinq à sept palangriers serait viable. Chaque navire pourrait capturer environ 3500 t par an : 1100 t de thons, 1900 t de requins et 500 t d'autres espèces, principalement des portes-épée. Les captures estimées de cette flotte seraient d'environ 17 500 à 24 500 t par an.

Des expériences de pêche à la canne furent réalisées en 1976, au moyen d'un navire affrété au Cap Vert. Quatre campagnes furent réalisées avec une amélioration progressive de la performance résultant des adaptations et de l'expérience des équipages mozambicains et Cap-Verdiens. La dernière campagne, réalisée en décembre, était en fait une campagne de pêche commerciale, visant à capturer du listao à une période où celui-ci est connu pour être abondant dans le sud des eaux du Mozambique (à l'est de Maputo). Les taux de capture résultant étaient de 6309 kg par jour de pêche avec un équipage de 10 personnes et une durée totale de pêche de

huit jours. Si l'on prend en compte le nombre total de jours (16) avec six jours de pêche des appâts et deux jours de navigation, le taux de capture était de 3154 kg par jour<sup>4</sup>.

### **Pêcheries sportives**

La pêche sportive est réglementée par le Décret 51/99 « Réglementations des pêcheries récréatives et sportives ». Ce règlement fournit un ensemble complet d'outils de surveillance et de contrôle pour gérer ces activités : attribution de licences, engins autorisés, engins interdits, espèces autorisées, espèces protégées, limites de captures, zones de pêche. Depuis 2000, avec le développement de l'industrie du tourisme, la pêche sportive a également connu un développement, et cible principalement les portes-épée, notamment les marlins et le voilier. Les pêcheurs sportifs qui souhaitent conserver leurs trophées doivent payer des taxes supplémentaires. À ce jour, le système de déclaration des captures pour les pêcheries sportives n'est pas opérationnel et les captures de ces pêcheries ne sont donc pas déclarées à l'administration des pêches.

<b>Fishery</b>	<b>Gear</b>	<b>Year</b>
<b>Tuna</b>	<b>Drifting surface longline</b>	<b>2011/2012</b>

*The purpose of this document is to present the main conditions and requirements for tuna commercial fishing activities in Mozambique. This document serves to communicate the basic information on the Tuna fishery and its management regime to fishing companies.*

*These conditions and requirements for commercial fishing of "Tuna" with "drifting surface longline" are valid for the period of January 1st 2011 to December 31st 2012.*

*These conditions and requirements applies to fisheries for "tuna" in waters of the Indian Ocean within the Mozambican EEZ for any national or foreign fishing vessel, and on the high seas only for Mozambican flagged fishing vessels.*

*These conditions and requirements can be revised at any time by the National Fisheries Administration.*

*The General Director of the National Fisheries Administration (ADNAP) approves those conditions.*

---

**Open time**

The fishery is open from 1<sup>st</sup> January to 31<sup>st</sup> December 2011/2012.

---

**Close Times**

There are no close times for the 2010/2011 tuna fishing season.

## Targeted species

These 5 species are defined as tuna targeted species:

<p>Albacore tuna – Atum voador (<i>Thunnus alalunga</i>)</p> 	<p>Skipjack tuna – Atum gaiado (<i>Katsuwonus pelamis</i>)</p> 
<p>Yellowfin tuna – Atum albacora (<i>Thunnus albacares</i>)</p> 	<p>Bigeye tuna – Atum patudo (<i>Thunnus obesus</i>)</p> 
<p>Southern bluefin tuna – Atum vermelho do sul (<i>Thunnus maccoyii</i>)</p> 	

The following species are caught incidentally during the fishing operations targeting tuna species:

Code	English name	Portuguese Name	Scientific name
BLM	Black Marlin	Espadim negro	<i>Makaira indica</i>
BLZ	Indo-Pacific Blue Marlin	Espadim azul	<i>Makaira mazara</i>
MLS	Striped Marlin	Espadim raiado	<i>Tetrapturus audax</i>
SFA	Indo-Pacific Sailfish	Veleiro	<i>Istiophorus platypterus</i>
SSP	Short-billed spearfish	Espadim de focinho curto	<i>Tetrapterus angustirostris</i>
STS	Streaked seerfish	Serra (lineolatus)	<i>Scomberomorus lineolatus</i>
SWO	Swordfish	Espadarte	<i>Xiphias gladius</i>

These species are reported in the fishing licence.

---

**Species minimum size**

There is no size limit for the target species.

---

**By-catch & discard**

- By-catch

The species authorized as by-catch are all others species of the IOTC list, see annexe I.

The by-catch limit is 10% of the total catches onboard the fishing vessel per fishing trip.

- Finning

Finning, the practice of removing only the fins from the sharks and discarding the remainder of the shark at sea, is strictly prohibited.

In line with IOTC Resolution 05/05 concerning the conservation of sharks caught in association with fisheries managed by IOTC, fishing vessels must not have onboard fins that total more than 5 % of the weight of sharks onboard, up to the first point of landing.

- Discard

The discard of any target species caught during the fishing operation is strictly prohibited.

---

**Gear**

- Authorized fishing gear

The authorized fishing gear is drifting longline. Only drifting longline is authorized onboard the fishing vessel. Under the licence conditions, the fishing vessels are only authorized to operate drifting longline.

The gear code for drifting longline is LLD (International classification of types of fishing gear - ISSCFG). The LLD code must be reported in any forms or reports when fishing gear type has to be specified.

The longline is composed of a monofilament mainline, branch line, hooks, buoys and electronic devices, such as transponders and radio beacons fixed on the extremity or spar buoys. Longline fishing vessels can be equipped with shooting machines and powered line hauler. The baiting of hooks can be manual or automatic (baiting machine). The storage of the main line is made on a drum, a spool or a reel.

- Marking

Extremity buoys of the drifting longline must be marked with the fishing licence number in order to identify the owner of the fishing gear.

This is a condition of the authorization to fish that will be verified during the port inspection prior issuance of the licence.

Extremity or spar buoy must be fitted with flag, reflector and lights as per the following specifications (FAO).

- a) the pole of a spar buoy extending above the floatation buoy should have a height of at least 2 metres;
- b) radar reflectors are required, they should be fitted at the top of the pole;
- c) the size of flags should not be less than 25 centimetres in height and 35 centimetres in width; flags should be made of waterproof material in fluorescent colours;
- d) lights should be attached to the pole in such a way that they will not be obscured by a flag;
- e) intermediate floats should have a diameter of not less than 50 centimetres.

This is a condition of the authorization to fish that will be verified during the port inspection prior to issue the licence.

- Gear specifications

There is no specific gear specifications associated with the drifting longline with regards to length of the main line or number/size of hooks.

The use of steel trace is prohibited on the branch line.

The use of circle hook is strongly encouraged to avoid catch of marine turtle.

- Soaking depth and time

There is no specific soaking depth and no specific soaking time defines for drifting longline.

- Distance between fishing gear

There is no specific distance to keep with others fishing gears.

- Fishing gear not authorized

Only drifting longline is authorized onboard the fishing vessel. All others fishing gears are prohibited, including but not limited to: driftnet, trammel net, gillnets, entangling nets, trawl net, seine net. This list is not exhaustive.

---

## **Licensing**

The original hard copy of the license is required on board the fishing vessel at all times while in Mozambique's waters and in Mozambican ports.

### a) Licence type and fees

The license fee is payable to the ADNAP. The following annual license fees apply for foreign fishing vessels:

First tuna fishing vessel	
Landing in Mozambique port	Landing in foreign port
26.000 USD / year	32.000 USD / year
Additional tuna fishing vessel	
26.000 USD / year	36.000 USD / year

The license fee is reduced by 10% if a minimum of 3 Mozambican seamen embark.

### b) Procedure for licence application

Commercial fishing licenses are issued and renewed on an annual basis. ADNAP process the demand for fishing license toward a fishing license application form.

License applications form is to be requested to:

**Administração Nacional das Pescas**  
**Departamento de Administração das Pescas**  
**Rua Consiglier Pedroso 347**  
**CP 1723**  
**Maputo**  
**Mozambique**

The application must be complete for all information requirements and legible or it will be returned to the applicant unprocessed. It should be noted that inaccurate or inadequate data will result in a longer processing period and may result in denial of fishing privileges in Mozambique. All applicants are urged to ensure that all required data is provided on initial application to facilitate this process.

Completed application for licences issued pursuant to the Fisheries Law and Regulations must be submitted with the following documentations:

- Vessel certificate of registry,
- Up-to-date certified drawings or descriptions of the layout of the fishing vessel, and in particular the number of fish holds of the fishing vessel, with their storage capacity expressed in cubic metres,
- Ship security certificate (ISPS code),
- Ship Safety Radio Certificate (SOLAS 1974),
- Ship Safety Equipment Certificate (SOLAS 1974),
- Safety Management Certificate (SOLAS 1974),
- International Tonnage Certificate (Convention on Tonnage Measurement of Ships, 1969),
- Original copies of company registration and shareholders,
- Vessel history & past owners,
- List of cargo vessels your vessel intend to tranship to.
- A colour photograph showing a side of the vessel, the photograph must at least be 15 cm by 10 cm.

Completed application for license is to be addressed to:

**Administração Nacional das Pescas**  
**Departamento de Administração das Pescas**  
**Rua Consiglier Pedroso 347**  
**CP 1723**  
**Maputo**  
**Mozambique**

The request for fishing license is processed by ADNAP within a delay of 15 working days.

The fishing license application form can be found at annexe II.

c) Procedure for issuance of licence

Once the fishing license request has been processed and approval has been given, the fishing license is issued by ADNAP.

The fishing licence is delivered to the owner / captain of the fishing vessel upon a pre-fishing briefing and inspection of the fishing vessel in port.

ADNAP will communicate the designated port for the pre-fishing briefing and inspection.

The pre-fishing briefing is a pre-condition to being permitted to fish in Mozambique's waters. Fishing prior to the initial port visit for the pre-fishing briefing will be considered a serious offence.

It is after this briefing and port inspection that the operators are provided the hard copy of their license and authorized to commence fishing.

d) Procedure for renewal of licence

The procedure to follow for renewal of fishing licence is the same as described in b).

The renewal of the fishing license follows certain conditions. The fishing license may not be renewed if:

- The logbook has not been submitted in time and according to the time frame imposed by the ADNAP,
- The licensee has committed an offence against the management measures in place and the license conditions.

e) Licence conditions

The conditions to exercise the fishing activity are mentioned in the fishing licence. Additional fishing licence conditions may be added to the fishing licence depending of the management measures and provision in the legal framework related to the Tuna Fishery.

---

***Catch restriction***

There is no TAC or quota set for the target species.

---

***Fishing area***

The EEZ of Mozambique from 36 Nautical Miles from the coast or from a minimum dept of 100 m to the limit of the Mozambican EEZ.

---

***Reporting and monitoring***

There are several reports that are required regularly by the Ministry of Fisheries & ADNAP, they are listed below:

a) Leaving/entering port

Leaving and entry in Mozambican ports must be notified to ADNAP at least 24 hours prior to departure or arrival in port.

b) Entry/exit of EEZ

The master of the fishing vessel must notify by fax or electronic email, the position of the vessel and the quantity of catch on board by species. The report must be sent to ADNAP at least 24 hours before entry or exit events. The format of the report can be found at annexe III.

c) Regular position & catch reporting

When in Mozambican waters, the master of the fishing vessel must notify by fax or electronic email, every 3 days, the position of the vessel and the quantity of fish caught during those 3 days in the waters of Mozambique. The format of the report can be found at annexe III.

d) Fishing logbook

As a condition of licence, all vessels fishing for tuna and tuna like species must maintain and complete a fishing log book. Information collected in fishing log books is used for assessing catch and effort, collecting scientific data and as a compliance monitoring tool.

The format of the logbook comply with the IOTC format as per Resolution 08/04 Concerning The Recording Of Catch By Longline Fishing Vessels In The IOTC Area (see annexe IV).

The log books must be completed and the operator or master of the fishing vessel must submit the logbook at any time upon request of ADNAP and no later than 15 days after the expiry of the fishing licence.

The logbook must account for all fishing trips including those where tuna are not caught. The logbook must be completed daily and per fishing operation or set.

The captain of the vessel is responsible to maintain the records in the logbook. The logbook shall be kept in a place where it is protected from damage and shall be readily available for inspection at any time upon the request of an authorized officer.

e) Landing

All landing are monitored in the presence of fisheries inspectors.

---

***Transshipment***

Transshipment of tuna and tuna like species at sea is ban in Mozambique (TS and EEZ).

All transshipment operations of tuna and tuna like species in Mozambique waters must take place in port.

a) Licensing of carrier/cargo/support vessels

All carrier/cargo/support vessels supporting fishing vessels for transshipment of fish, for refuelling or for resupplying any kind of goods or

services are requested to apply for a fishing licence according to the same procedures than the fishing vessels. Completed application for licenses of carrier/cargo/support vessel must include the documentation listed in the section on licensing procedure and provide a list of the fishing vessels the carrier/cargo/support vessel intend to support.

b) Transshipment procedures:

All transshipment operations in port are subject to the following notification procedures:

- **For fishing vessel**: prior to transshipping, the captain of the fishing vessel must notify the following information to the ADNAP (Port State authorities), at least 48 hours in advance:
  - the name of the LSTV and its number in the IOTC record of fishing vessels,
  - the name of the carrier vessel, and the product to be transhipped,
  - the tonnage by product to be transhipped,
  - the date and location of transshipment,
  - the major fishing grounds of the tuna and tuna like species catches.
- **Receiving vessel**: Not later than 24 hours before the beginning and at the end of the transshipment, the master of the receiving carrier vessel shall inform ADNAP of the quantities of tuna and tuna-like species transhipped to his vessel, and complete and transmit the transshipment declaration, to ADNAP within 24 hours.

All transshipment operations in port are monitored under the presence of a fisheries inspector.

c) Designated fishing port

The designated fishing ports where transshipment operations are permitted in Mozambique are Maputo and Beira (as per PSMA requirements).

d) Transshipment declaration form

The transshipment form can be found in annexe V.

---

### ***Marking of fishing vessel***

While in Mozambique waters or in Mozambique port, fishing vessels must display on both sides of the funnel or the superstructure, in contrasting colours at least 1 meter high, the fishing license number so that it is clearly visible both from the sea and the air.

Note that not displaying the fishing license number is a serious offence under the Marine Fisheries Regulation (Decree 43/2003).

The vessel name, registration number, international radio call sign, port of registration must also be displayed for identification purpose and be

consistent with the FAO Standards Specifications for the Marking and Identification of Fishing Vessels.

No fishing vessel is authorized to leave a Mozambique port with markings that are not consistent with the specifications mentioned above.

For others specifics marking requirements, refer to the conditions of the fishing licence (e.g. size, location).

---

### ***Stowage of gear***

Fishing vessel entering into Mozambique waters to come to port for inspection / issue of licence or any others reasons must comply with the following fishing gear stowage requirements:

- all gear shall be covered and the cover shall be secured;
  - hooks shall be removed from the main line and locked in a secured compartment;
  - bait shall be kept in the freezer or in a place where it is not readily available for fishing.
- 

### ***Documents to be carried on board fishing vessel***

While in Mozambique waters or in Mozambique port, the following documents must be carried on board fishing vessel:

- a) documents issued by a competent authority of the flag state of such fishing vessel, showing:
  - the name of the fishing vessel;
  - the number under which the fishing vessel is registered, the Vessel Certificate of Registry,
  - the international radio call sign of the fishing vessel;
  - the name and address of the owner(s) of the fishing vessel;
  - all technical specifications pertaining to the fishing vessel as are specified in the relevant application for a licence in respect of the fishing vessel,
  - as well as: Ship security certificate (ISPS code), Ship Safety Radio Certificate (SOLAS 1974), Ship Safety Equipment Certificate (SOLAS 1974), Safety Management Certificate (SOLAS 1974), International Tonnage Certificate (Convention on Tonnage Measurement of Ships, 1969);
- b) up-to-date certified drawings or descriptions of the layout of the fishing vessel, and in particular the number of fish holds of the fishing vessel, with their storage capacity expressed in cubic metres;
- c) if any modification was made to the characteristics of the fishing vessel with respect to its length overall, its gross registered tonnage, the horsepower of its main engine or engines or its hold

capacity, a certificate, certified by a competent authority of the flag state of the fishing vessel, describing the nature of such modification;

- d) if the fishing vessel is equipped with chilled or refrigerated sea-water tanks, a document certified by a competent authority of the flag state of the vessel indicating the calibration of the tanks in cubic metres;
- e) the original of the fishing licence and authorization to fish outside the waters under the jurisdiction of the flag State issued in respect of the fishing vessel;
- f) a copy of Mozambique Fisheries Law (Lei n° 3/90) and Marine Fisheries Regulations (REPMAR Decree n° 43/2003).

---

### **VMS**

As a condition of licence, all vessels fishing for tuna and tuna like species must be equipped and have a functional Vessel Monitoring System (VMS) onboard to operate in the tuna fishery.

This is a condition of the authorization to fish that will be verified during the port inspection prior issuance of the licence.

While in Mozambique waters or in Mozambique port, fishing vessels must transmit position every hour or otherwise specified in a fishing agreement.

The VMS device installed on board must, at all times, ensure the automatic transmission of the following data: 1) the fishing vessel identification, b) the position of the fishing vessel, expressed in latitude and longitude, 3) the date and time, expressed in UTC, 4) the speed (Kn) and course (Degree) of the vessel.

The master of a fishing vessel must ensure that the VMS device is fully operational at all times and that the data are transmitted.

In case of a technical failure or malfunction of the VMS device, the owner or master of the vessel must communicate, by fax or electronic mail, at least every four hours, the position of the vessel.

The defective VMS device must be repaired or replaced within 10 days from the date the technical failure or malfunction was detected. After this period, any foreign fishing vessel must leave Mozambique waters or come to a Mozambican port to repair or replace the defective device.

---

### **Protected species**

The release of marine turtle, dugong, whales and dolphins caught accidentally during fishing operation is mandatory.

All dead animal must be kept on board and reported to ADNAP within not more than 12 hours.

The list of protected species can be found at annexe VI.

---

## **Conversion factor**

The conversion factors for target species used to convert weight of processed tuna to live weight are the IOTC conversion factor:

<b>Code</b>	<b>English name</b>	<b>Scientific name</b>	<b>Processing</b>	<b>Conversion factor</b>
ALB	Albacore tuna	<i>Thunnus alalunga</i>	GGT	1.1
BET	Bigeye tuna	<i>Thunnus obesus</i>	GGT	1.09
BET	Bigeye tuna	<i>Thunnus obesus</i>	HDD	1.43
SKJ	Skipjack tuna	<i>Katsuwonus pelamis</i>	GGT	1.09
YFT	Yellowfin tuna	<i>Thunnus albacares</i>	GGT	1.09
YFT	Yellowfin tuna	<i>Thunnus albacares</i>	HDD	1.43

List of processing code for IOTC species:

<b>Processing</b>	<b>Code</b>
Fish not processed - Small tuna, tuna-like and shark By-catch species are commonly not processed.	WHO /EWHO
Bills (if any), gills and fins off, gutted - Tuna specimens usually undergo this form of processing.	GGT/EGGT
Dressed carcasses with heads and fins off and tail present	HDD/EHDD
Dressed carcasses with fins and caudal peduncles off - Gutted with gills Billfish (mainly sailfish) and by-catch specimens are sometimes processed this way	GWG/EGWG
Dressed carcasses with heads and fins off and caudal peduncles present. Billfish (mainly sailfish) and by-catch specimens are sometimes processed this way as are some shark by-catch specimens.	TAL/ETAL
Dressed carcasses with heads, fins and caudal peduncles off. Billfish export, reject and by-catch specimens are usually processed this way as are some shark by-catch specimens.	PDD/EPDD
Fish processed and dried on-board (skipjack)	DRY/EDRY

## Annexe I

### Species code of tuna and tuna like species

The below species list constitutes the official IOTC list. They are the species under the conservation and management mandate of the IOTC.

<b>Code</b>	<b>English name</b>	<b>French name</b>	<b>Portuguese name</b>	<b>Scientific name</b>

Captain signature and stamp:

Remarks:

## **PROVISION OF DATA AND STATISTICAL INFORMATION**

The Fisheries Law nº 3/90 and the Marine Fisheries Regulation Decree 43/2003, chapter III article 128º, stipulate that all industrial fishing vessels authorized to operate in the maritime waters of Mozambique will forward to the competent services of the Ministry of Fisheries statistical data and other necessary information on captures through provided forms and the stated periods that will have been prescribed. The non-compliance with these dispositions will constitute a serious infraction, and is punishable under the terms of the same Fisheries Law.

The format of logbook distributed to fishing master match the requirements of IOTC resolution 08/04 concerning The Recording Of Catch By Longline Fishing Vessels In The IOTC Area.

### **THE LOGBOOK**

All commercial fishing vessels operating in the territorial waters and the ZEE of Mozambique must obtain a logbook distributed by the National Directorate of Fisheries, and that will have to be filled in by the captain of the vessel.

The log book will have to be filled in on a daily basis, and be completed within 24 hours upon return of the ship to port. All vessels will be supplied with enough logbooks for each fishing campaign. Every record is effected in three copies (one original and two duplicates). One of the duplicates is to be removed, and remains in the possession of the captain.

The captain will certify with his signature that the estimates of the captured and registered amounts in the logbook are reasonable, and must not exceed an error margin of 10%.

The logbook has to be sent to the National Directorate of Fisheries:

**Administração Nacional das Pescas  
Rua Consiglier Pedroso 347  
CP 1723 - Maputo,**

at the latest 48 hours upon arrival of the ship in port or upon exit of Mozambique waters.

### **PROCEDURES FOR FILLING IN THE LOGBOOK**

The logbook will have to be filled in with neat and easily readable characters.

Records in the logbook must not be modified or deleted. In the event of an incorrect entry, strike out the entry with a horizontal line and insert a new entry next to it.

All entries must be recorded by the captain of the vessel.

### **FILLING IN THE TRIP LOG**

#### **Record once in one cruise**

This part refers to technical vessel characteristics, which are recorded in the trip log:

#### **INFORMATION OF REPORT**

- 1) Date of the submission of logbook.
- 2) Name of reporting person

#### **VESSEL INFORMATION**

- 1) Vessel name
- 2) Call sign: If call sign is not available, other identical code as registration number should be used.
- 3) Vessel size: Gross tonnage (in MT) and/or overall length (in m)

#### **CRUISE INFORMATION**

- 1) Departure date and port
- 2) Arrival date and port

#### **GEAR CONFIGURATION**

- 1) Average Branch line length (m): Straight length in meter between snap and hook. See Figure 1.

- 2) Average Float line length (m): Straight length in meter from the float to the snap
- 3) Average Length between branch (m): Straight length of main line in meter between successive branch lines.
- 4) Main line material classified into four categories, Thick rope (Cremona rope), Thin rope (PE or other materials), Nylon braided and Nylon monofilament.

### **FILLING IN THE DAILY LOGSHEETS**

This part refers to information about fishing areas and weights captured by species.

#### **Record one record for each set**

#### **OPERATION**

- 1) Date of set (YYYY/MM/DD).
- 2) Position in latitude and longitude: either at noon (local time) position or position of start of gear setting, area code of operation (e.g.. Mozambique EEZ, High Seas, etc.) may be used optionally;
- 3) Local Time (24hr) of starting setting gear;
- 4) Sea surface temperature at noon with one decimal point, if available (XX.X °C);
- 5) The number of hooks between floats: If different hooks between floats were used in a single set, record the most representative one;
- 6) The number of hooks used in the set;
- 7) Number of lighsticks used in the set;
- 8) Type of bait used in the set

#### **CATCH / CAPTURES**

- 1) Catch in number and weight by species per set for each of the species and form of processing in section 2-3
