Less than 1 fish measured per metric tonne for some species.	Department of Fisheries is regularly collecting fisheries data on neritic tuna fishery from purse seines on a monthly basis via accidental sampling. This method has a limitation that landed fishing boats are randomly found. As a result, landed purse seiners could not be found during surveys or may be found with no neritic tuna catches. Together with relevant factors which cause difficulty in data collection. The nature of neritic tuna fishery in the Andaman Sea which generally fish during the waxing moon phase that cause difficulty to schedule surveys, monsoon winds in the area that cause fishing boats cannot fish all year round, also the limited of officers and budget for surveys. Furthermore, the new outbreak
