The reasons for this partial implementation are financial. Currently, five regions are concerned by the collection of data on coastal fisheries, and will be increased gradually depending on the available budgets.</i></p>	The data collection system (mobile application and WEB) for coastal fisheries was set up and operational in mid-October 2024 in five regions and extended to the south in March 2025. The coverage of this type of fishery is often the representativeness of the fishing unit in the stratum and depending on available budgets. In addition, the Secretariat's assistance mission at the end of March 2025 made it possible to improve and readjust the data collection system as well as sampling. However, the implementation of this measure remains a challenge for Madagascar, and depends on very significant financial resources.
